

DAS limit-setting exercises

Kuan-Yu Lin

Initial proposal

- 1h intro: explain the basic concepts and the exercises
- 1h guided tutorial:
 - Doing fit with workspaces
 - Using toys (bootstrapping) to estimate limits
 - Asymptotic approximation

System requirements

- Aliya: compile the codes before the introduction.
- Can ask summer students to test the time length.
- I haven't searched for facilitators yet. Will do so.
