# EGM short exercise

Short introduction with slides and three different small exercises:

- Energy regression
- Electron and photon identification
- Electron and photon ID SFs

Exercises almost ready and available at: <https://gitlab.cern.ch/cms-egm-das-2025>

- Do students have their own eos area? The third exercise requires some disk space and the possibility to access cernbox to check the results.
- **An additional facilitator is needed**, as I will most likely be unable to participate in the DAS school due to contract reasons. I will, however, still assist with the preparation of the exercises.
