

Tau exercise

— Andrea Cardini, Alexei Raspereza —

Plan

- Introduction to tau Reco and ID in CMS
 - 2 python notebooks based on exercises prepared for the DAS@CERN 2024:
 - <https://gitlab.cern.ch/cmsdas-cern-2024/short-ex-tau>
 - Tau reconstruction and DM identification (HPS)
 - no changes planned wrt to 2024
 - Tau identification (DeepTau) + can update to add Pnet/UparT)
 - work on new tuples to include PNet+UParT (nanoV15)
- Needs:
 - Storage space for a few tuples / computers that can access public tuples on EOS
 - Students can use swan?

Current status

- Notebooks still working on swan with old nanoAOD files
 - Run 3 MC already in use
- Update of input files to nanoV15 being done
 - Possibility to test comparison between different tau identification algorithms
 - DeepTau v2.5, PNet, UParT
