WP C1 - RF driver linac status

- Tooling: Will improve the "RF_ACCELERATOR" bits of ABEL
  - Better organization of code - currently much of the physics features in CLICopti is not possible to access

- Once tooling in place, will work on optimizing the RF driver linac
  - Optimize the structures better for drive beam accelerator use
  - Start of simple beam dynamics and short&long range wake modelling

- Currently my ABEL work is going to the more general parts needed for release
  - Hope to have have more time now that Abel and the plasma stage code is out

For comparison, it would be good to see the Oxford summer student report.
