

25th International Symposium on Parallel and Distributed Computing

Wednesday 1 July 2026 - Friday 3 July 2026

DESY, Hamburg

Scientific Programme

The scientific program is designed to showcase cutting-edge research in both foundational and emergent areas of parallel and distributed computing, with a special focus this year on **xxx**.

Contributions will be grouped into thematic sessions covering algorithmic, architectural, software, and system-level advances. In parallel, short paper and poster sessions will provide space for early-stage ideas, prototypes, and experimental work.

You can additionally expect keynote talks by leading researchers.

Check back closer to the conference dates for the detailed session schedule, speaker list, and abstracts.

Main Track

This track features **peer-reviewed research papers** presenting **original contributions** in all areas of parallel and distributed computing. Topics include theoretical advances, algorithmic innovations, systems design, performance evaluation, and emerging applications. Both long and short papers are welcome.

Poster Session

The poster session provides an interactive forum for presenting work in progress, innovative ideas, prototypes, and applications. Authors have the opportunity to discuss their research directly with participants.
