

Cavity database and EDMS CEA status

E-XFEL Accelerator Consortium

17th April 2012

Data-transfer (1)

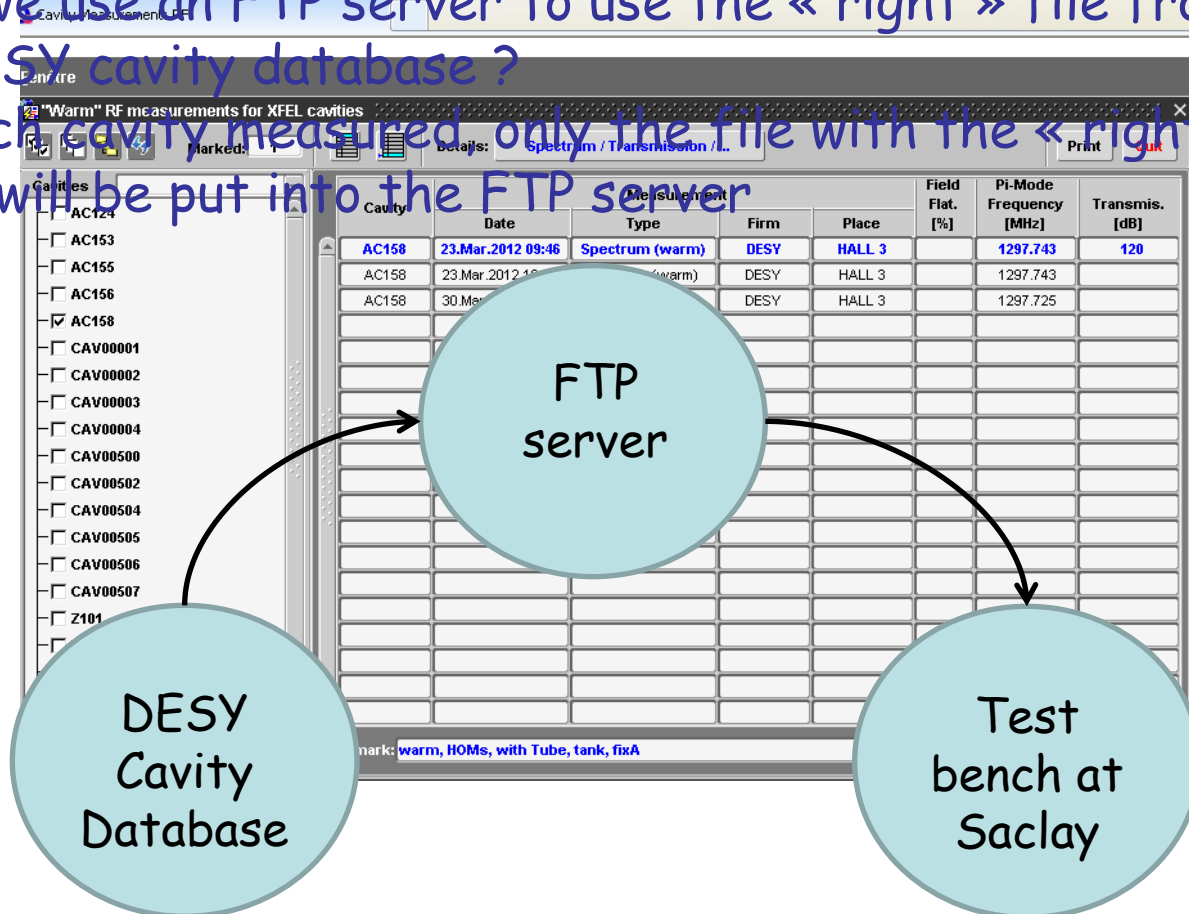

Several measurements for one cavity

- How could we identify the « right » measurement »?

With no manual search

Could we use an FTP server to use the « right » file from the DESY cavity database?

For each cavity measured, only the file with the « right » values will be put into the FTP server

Saclay Database

A data-base at Saclay was created for the files (.CRF, .WFT and .XLS files) generated by each test-bench.

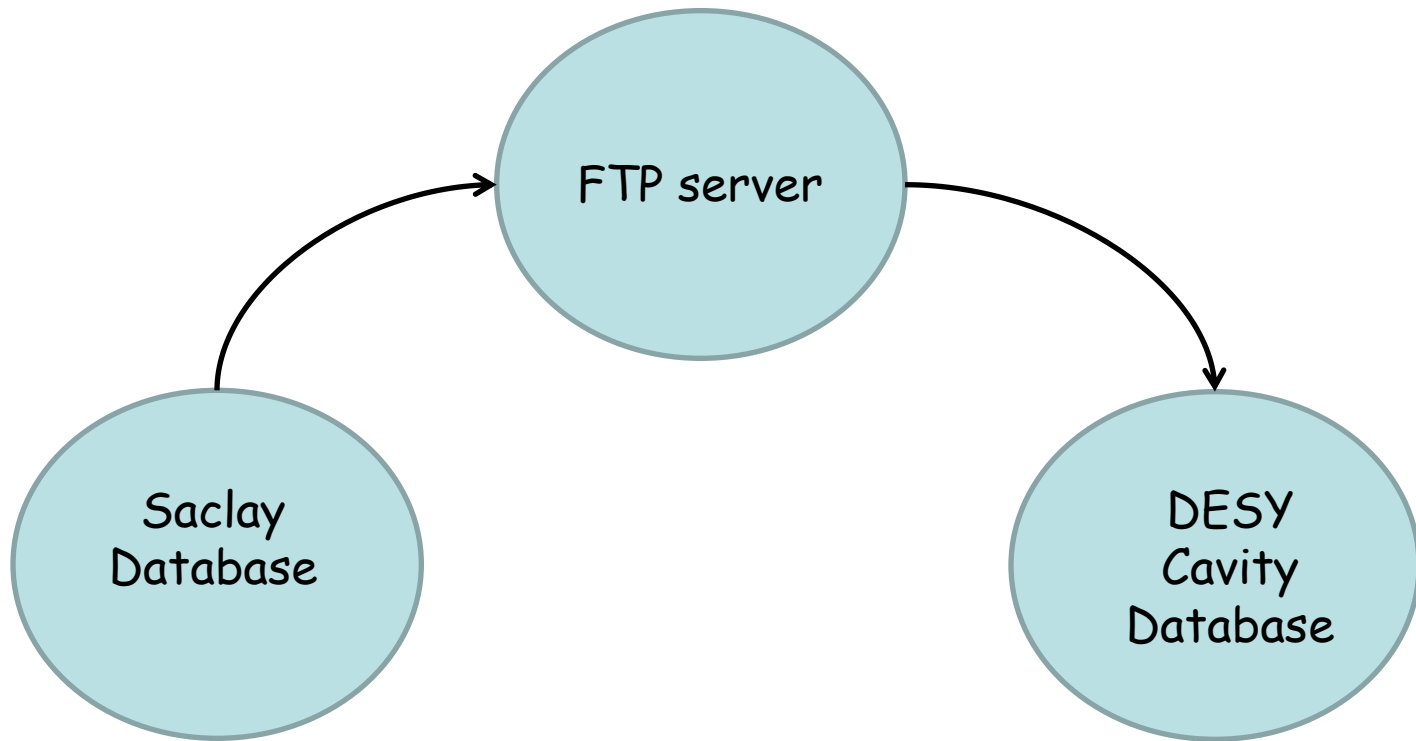

Data transfer (2)

An FTP server could be also used to put files .CRF and .WFT created with the 3 test benches.

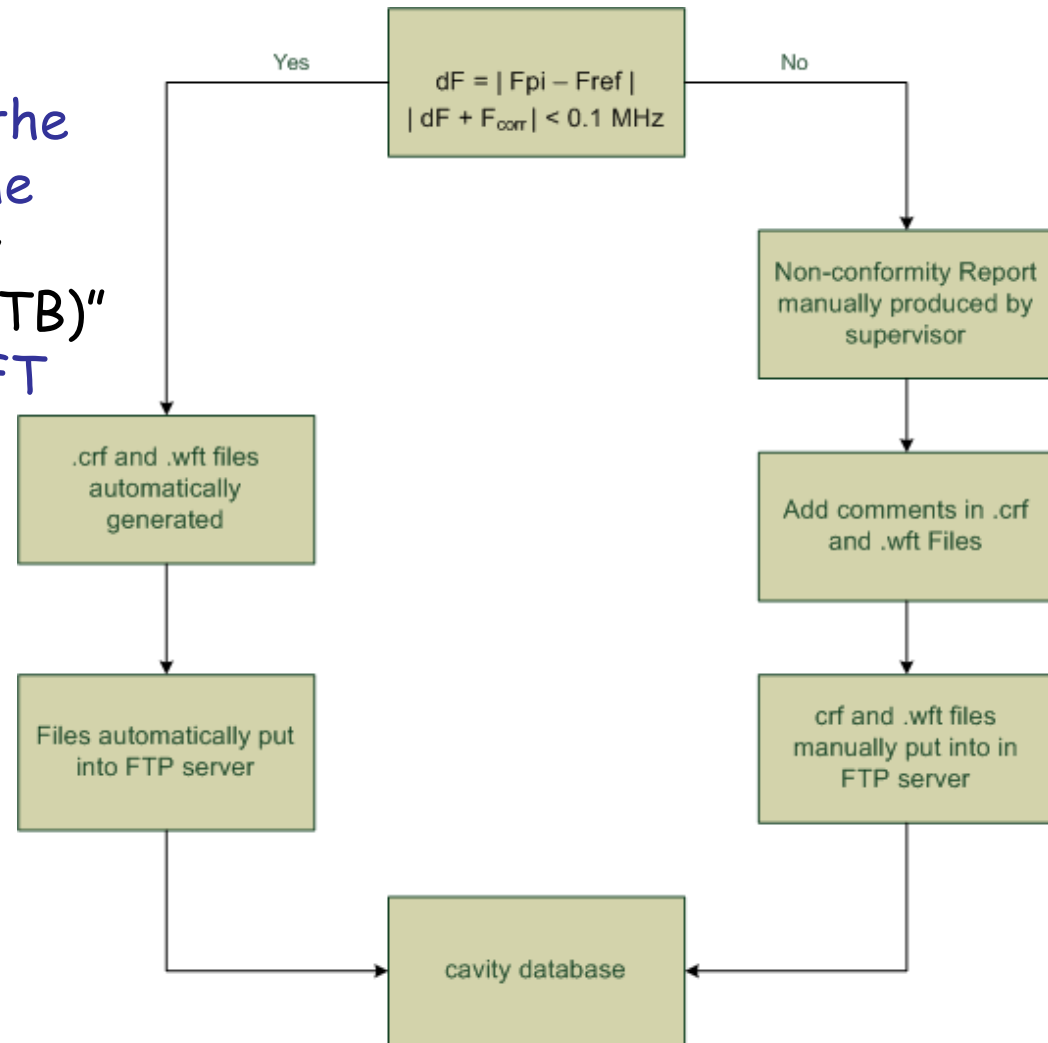

Files will be available to be downloaded to the DESY cavity database.

Test Bench for cavity reception (ISO5-REC-TB)

- How could we manage the non-conformities on the "Test Bench for cavity reception (ISO5-REC-TB)" with the .CRF and .WFT files ?

.CRF and .WFT Files (1)

Concerning the name of file, we thought used same file that files .xls generated for EDMS i.e:

TR_F1_CAVxxxx_hhmm_yymmdd.WFT & TR_F1_CAVxxxx_hhmm_yymmdd.CRF
F1 will be for the measurements done on the test bench for cavity reception

TR_F2_CAVxxxx_hhmm_yymmdd.WFT & TR_F2_CAVxxxx_hhmm_yymmdd.CRF
F2 will be for the measurements done on the test bench at string roll-out

TR_F3_CAVxxxx_hhmm_yymmdd.WFT & TR_F3_CAVxxxx_hhmm_yymmdd.CRF
F3 will be for the measurements done on the test bench at shipment area

.CRF and .WFT Files (2)

In the .CRF and .WFT files, there are comments:

- do we have to add some comments ?
- if yes, what kind of comments

```
# cavity

```

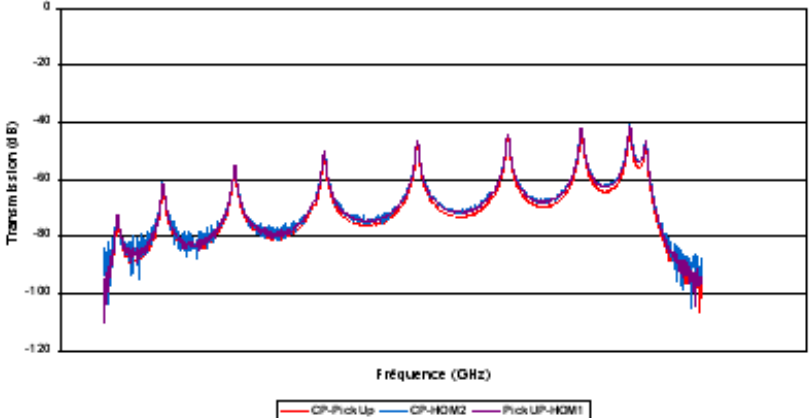

EDMS

l r f u

cea

saclay

- All files will be in pdf (traveller) and .xlsx (controls) format
- Which « fields » are mandatory to fill ?
- name of files : automatically generated by EDMS (choosing pre-filled items in fields) : confirmation
- Validation between CEA and Industrial company and then put in EDMS

Test Bench for cavity reception (IS05-REC-TB)

saclay

- Where is the back-up of the data ?
(local and at DESY ?)
- How to store data at CEA and insert them in EDMS report or other ?

TDR (1/2)

I r f u

cea

saclay

- 3 RF cables per cavity: Probe (3 m), HOM1 (2 m), HOM2 (3 m).
- 2 RF cables per coupler
- 4 cables per BPM
- Measurement device :
- Resolution asked (less than cm)
- Set up under development (E5061B-135 from Agilent) :
 - measure the length,
 - compare them with thresholds,
 - sends a list with all the cables and a "ok"/"not ok" info
- Up to now, no recording was asked :
 - Confirm
 - Or where and what ?

TDR (2/2)

l r f u

cea

saclay

- At which workstation :
 - after tuner assembly
 - after thermalisation on magnetic shield
 - after 4K welding,
 - after 70K welding
 - after thermalisation on 70K shield
 - after roll over,
 - after coupler warm part assembly
 - after flange connection
 - before shipping
- One file per measurement

String with cavity order

- Example from Axel reworked for CEA : sent by email [Configuration PXFEL2_2.xlsx](#)
- How is it foreseen in future ?
 - Email, EDMS, other ?
