

RGLite plug-in and gLitePROOF package

*Anar Manafov, GSI,
HEPCG Workshop, Dec 2007*

glite-api-wrapper

RGLite example

```
// Initializing RGLite plug-in
TGrid::Connect("glite");
// Submitting a Job to gLite Grid
TGridJob *job = gGrid->Submit("JDLs/proofd.jdl");
// querying a Status of the Job
TGridJobStatus *status = job->GetJobStatus();
status->GetStatus();
// Getting a Job's output back to the user
job->GetOutputSandbox("/home/anar/");
```

- Job submission,
- status querying,
- output retrieving.

```
// Initializing RGLite plug-in
TGrid::Connect("glite");
// Changing current File Catalog directory to "dteam"
gGrid->Cd("dteam");
// Querying a list of files of the current FC directory
TGridResult* result = gGrid->Ls();
// Printing the list out
Int_t i=0;
while (result->GetFileName(i))\
> printf("File %s\n",result->GetFileName(i++));
```

- Changing file catalog directory,
- querying lists of files.

RGLite features

➤ Workload Management System operations:

-  ➤ job submission – normal, DAG and parametric jobs (gLite WMPProxy API),
-  ➤ smart look-up algorithm for WMP-Endpoints,
- job status querying (gLite LB API),
- job output retrieving (Globus GridFTP).

➤ File Catalog operations (gLite/LCG LFC API):

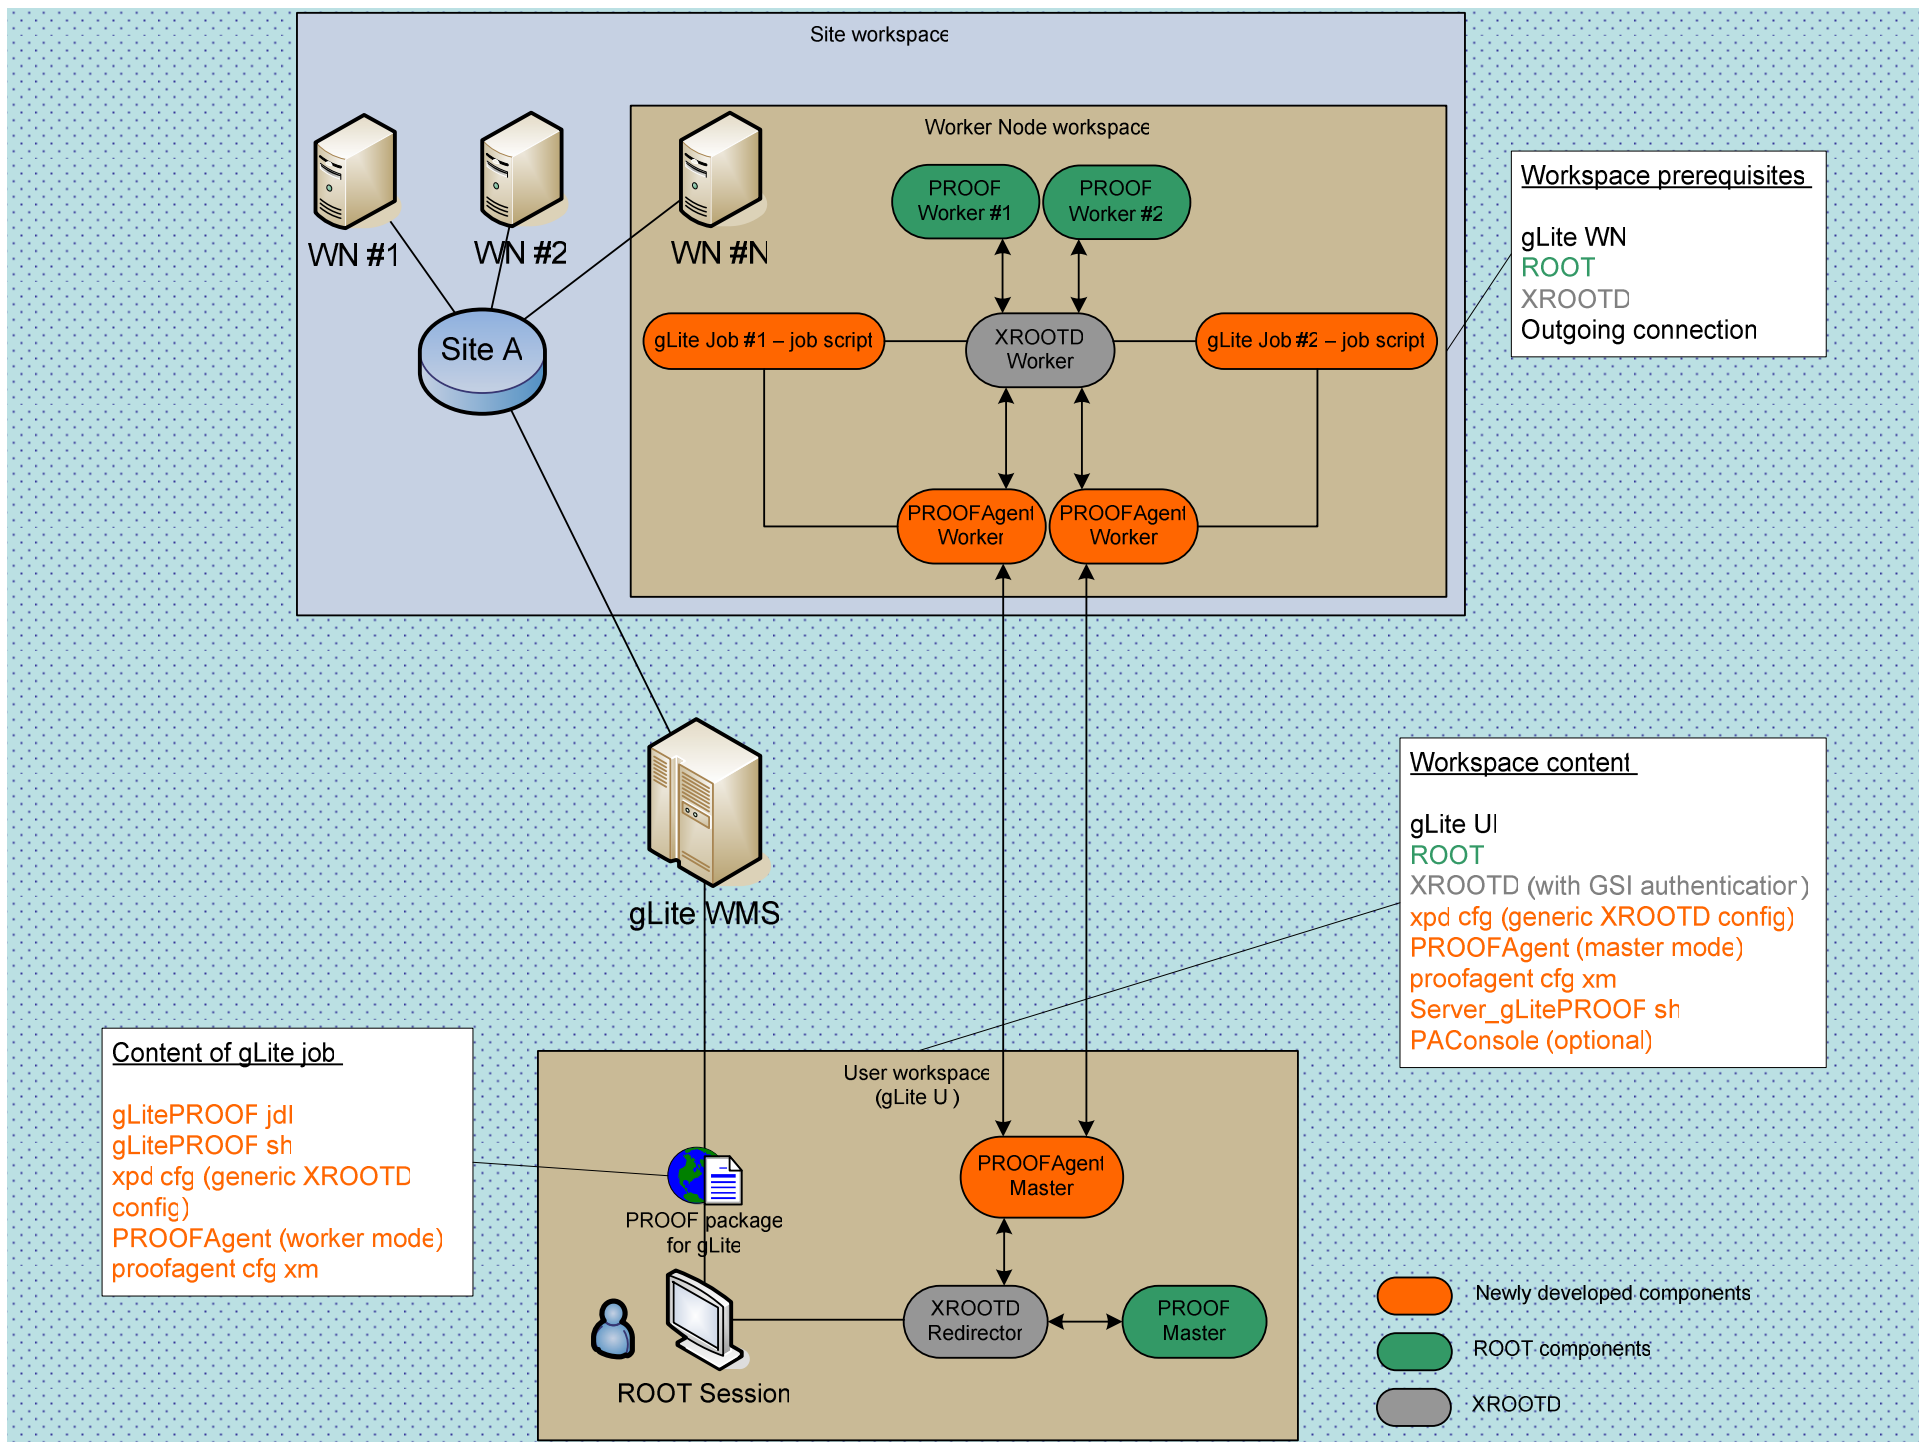

-  ➤ smart session manager,
- set/query the current working catalog directory,
- list files, directories and their stats,
- add/remove files in a catalog namespace,
- add/remove directories,
- add/remove replicas from a given file.

➤ An executive logging.

➤ Support of an external xml configuration file.

gLitePROOF – a gLite PROOF package.

It is a number of utilities and configuration files developed at GSI in terms of the D-Grid project and aims to implement a PROOF distributed data analysis on the gLite Grid.

 worker dech001@grid17.gsi.de:59676 (redirect through local

gLitePROOF summary

- Requirements
 - Client-Side: gLite UI 3.1, ROOT 5.17+,
 - Remote-Side: WMP Endpoint, open out. traffic (Globus ports on WNs).
- Easy in use
 - user friendly GUI,
 - works out of the box.
- Easy to extend
- Combines resources of the Grid and advantages of PROOF
 - transparency (local ROOT analysis <-> PROOF <-> gLitePROOF),
 - scalability (The basic architecture should not put any implicit limitations on the number of workers).
- Works on heterogeneous machines (gLite WNs)
- Uses xrootd and Grid methods to access data

Summary

➤ RGLite

- TGridXXX interface are implemented in RGLite for gLite MW.

 ➤ ROOT team accepted our suggestions to TGridXXX interface.

 ➤ uses WMP job submission.

 ➤ is compatible with gLite UI 3.1.

 ➤ is ready to be integrated into ROOT distributive (Jan 2008).

➤ gLitePROOF package

 ➤ Alpha release (tested against FZK and GSI WMSs).

- Setups "on-the-fly" a PROOF cluster on gLite Grid.

 ➤ works with mixed type of gLite worker nodes (x86_64, i686...).

 ➤ supports reconnections.

 ➤ provides GUI.

➤ Use of Agile methods of software development:

- Continuous integration (automated builds on SLC3, SL4, and F8, nightly builds).

- Unit tests.

- Projects metrics.

- Task tickets and sprints...
