Refactoring

Tuesday 9 October 2012 09:00 (1h 30m)

Code will never be perfect. Even worse, code always deteriorates! To cope with bad or inflexible code, the source code must or may be refactored once or twice or every day. For this, a small set of methods will be presented than may help developers to embed their daily duties into a formal basis. Further, the transformation of legacy code is discussed based on experiences made upon upgrading geant4.

Presenter: PIA, Maria Grazia (CERN)
