Quantum information and computation: foundations and current status - part 2

Tuesday 9 October 2012 11:30 (1h 30m)

In recent years we've seen the birth of an exciting new field known as quantum information (QI) theory. In these lectures I will introduce the basic concepts of QI, namely, qubits, quantum circuits, and quantum algorithms. I will also introduce some of the guiding problems of the field and describe recent applications of QI concepts to the study of strongly correlated physics.
