

# 6th Detector Workshop of the Helmholtz Alliance "Physics at the Terascale"

**Tuesday, 26 February 2013 - Friday, 1 March 2013**

**Institut für Physik, Johannes Gutenberg-Universität Mainz**

## Scientific Programme

This is the sixth Detector Workshop of the Terascale Alliance.

The workshop will be preceded by an introductory school on FPGA Programming. The school is aiming at students and young post-docs and includes hands-on laboratory exercises (this will be modeled following closely the similar school during the Detector Workshop at Bonn in spring 2012) .

During the workshop itself we will have topical sessions on Radiation Damage, Particle Flow and Track Triggers.

The workshop will be accompanied by the first meeting of the new alliance project "Enabling Technologies for Silicon Microstrip Tracking Detectors at the HL-LHC"
