Update on MTCA.4 for FLASH and XFEL

Wednesday 11 December 2013 09:45 (13 minutes)

MicroTCA will be used for all fast data acquisition systems of the European-XFEL. First MicroTCA installations for this project are currently commissioned. After a longer shut-down FLASH was equipped with several MicroTCA systems as well. These systems are used successfully in the daily operations. Further MicroTCA crates for a second undulatory beam line are being installed these days. The status of and experience with various MicroTCA components of these projects will be given.
