

# Collaborative Tools at the Analysis Centre Update

G. Brandt (DESY)

## Outline

- What happened so far
- MC Group requirements
- TWiki as Candidate
- Next Steps

**PHYSICS AT THE TERASCALE**  
Strategic Helmholtz Alliance

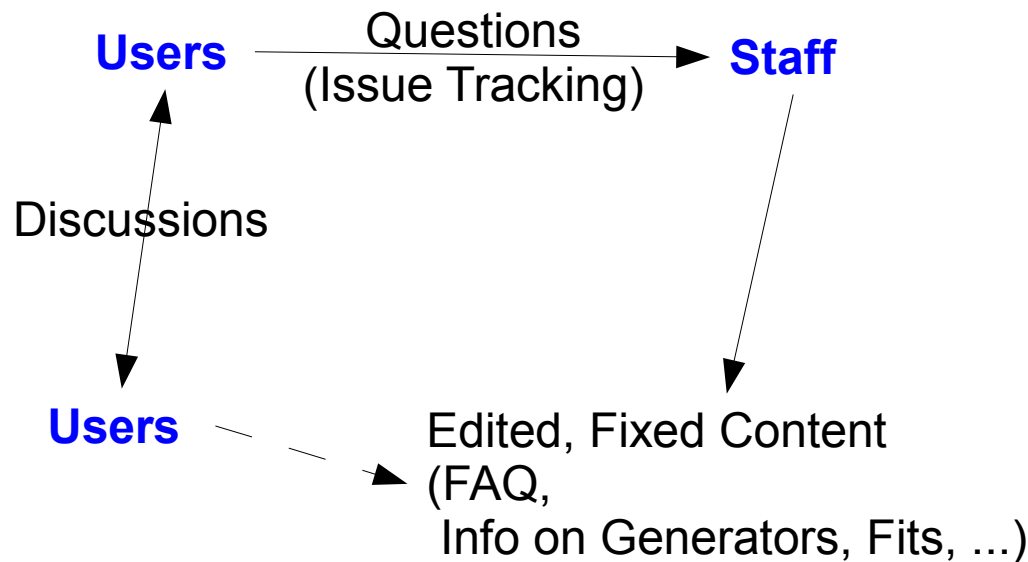

- Last time: Rough outline of possible features brainstormed (with help from P. van der Reest, IT)
  - It looks like we can pretty much have what we want
  - But what this is is not clear – should be decided half-way towards MC school
- Request for requirements on Analysis Centre mailing list
  - No replies
- Idea to unify tools with DESY-LHC (S. Schmitt, J. Katzy)
  - Also no replies
- Idea to unify tools with the other Terascale Alliance RTs (I. Brock)
  - No replies or need, eg. GRID RT have their own issue tracking in place

To proceed somehow, the plan is to go ahead with MC group directly and then offer what they have to the other groups, RTs and LHC experiments hopefully sparking some reaction.

**The discussion should focus NOW on planned content**  
(then we can go back to technical features)

- Agendas, Slides, etc. -> INDICO

## Minimal Software

- A wiki with good access control features and support for discussion or issue tracking like features

## Medium Software

- A wiki for edited content
- Forums for discussions / Questions

## Overkill Software

- Separate tools for Forums, Issue Tracking, Full Software development  
-> since this is not planned

<sup>1)</sup> Discussed briefly with Hannes yesterday – no circulation within group yet, done now
