

## Search for electroweak SUSY production at CMS

*Monday, 25 August 2014 15:20 (20 minutes)*

In this talk, the latest results from CMS on searches for supersymmetry produced through electroweak production channels are presented using 20 fb<sup>-1</sup> of data from the 8 TeV LHC run. A variety of complementary final state signatures and methods are used, such as searches with Higgs, W, and Z bosons in the final state, to probe gaugino and slepton production.
