

## CP violation in B decays at LHCb

*Tuesday 26 August 2014 15:15 (25 minutes)*

The LHCb experiment has a great potential for precise measurements of the CP violating phase in the standard model, and for searches of new phases. We report on recent measurements of the CP violating angle  $\gamma$  which is the least constrained parameter in the CKM unitarity triangle, the phase in B mixing, and direct CP violation in B decays.
