

## Recent Results from MINERvA

*Thursday 28 August 2014 16:30 (20 minutes)*

MINERvA (Main INjector ExpeRiment for  $\nu$ -A) is a few-GeV neutrino nucleus scattering experiment at Fermilab using various nuclei as targets. The experiment provides measurements of neutrino and anti-neutrino cross sections off of nuclear targets which are important for neutrino oscillation experiments and the probing of the nuclear medium. Presented are recent results from MINERvA on quasi-elastic, inclusive charged-current neutrino scattering, and pion production processes.
