

2011 legacy menu validation

- Old 2011 menu (from CMSSW_4_4_5_patch3, 5e33) ported to CMSSW_5_3_11_patch3
- Full ported trigger menu can be found here : `~alebihan/public/LegacyMenu_21-08.txt` (taken from confDB, /online/collisions/2011/5e33/v3.5/HLT/V*)
- Paths involving b-tagging : see next slide and <https://indico.cern.ch/conferenceDisplay.py?confId=256438>
- Paths using lepton in jets (B-tag POG) : `HLT_BTagMu_DiJet*_Mu5_V*`
- So far code of trigger menu only checked “by eye”, see last slides of <https://indico.cern.ch/conferenceDisplay.py?confId=256440>
- Relval samples :
 - target : <https://hypernews.cern.ch/HyperNews/CMS/get/datasets/2603.html>
 - reference relval : <https://hypernews.cern.ch/HyperNews/CMS/get/datasets/2645.html>

Validation of new paths

- We are currently modifying some paths changing the primary vertex reconstruction (FastPV instead of pixelPV)
- So far only timing tested, trying to use Igor's framework to test the modifications
- More generally validation should be automated and all paths involving B-tagging and from B-tag POG should be monitored
