

Replacement of pixelPV by fastPV

- First look, replacement in path QuadJet75_55_35_20_BTagIP_VBF_v6, no real improvement seen for timing (cf <https://indico.cern.ch/conferenceDisplay.py?confId=259438>) :

Replacement of pixelPV by fastPV

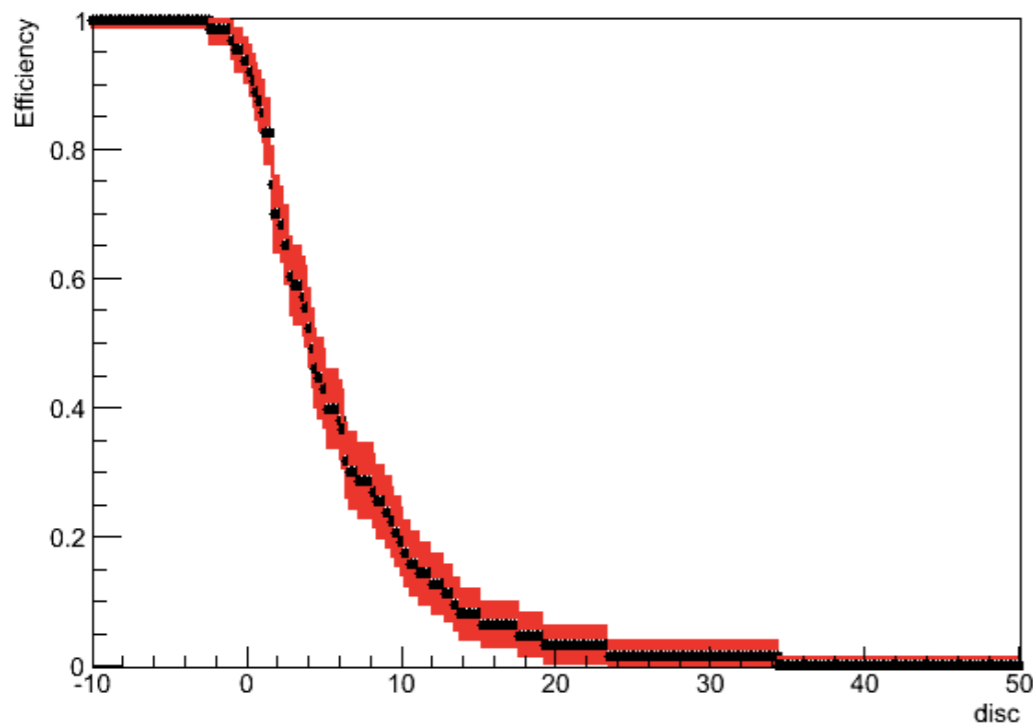

- Managed to generate 2k of ttbar events +run HLT+run validation using the modified menu

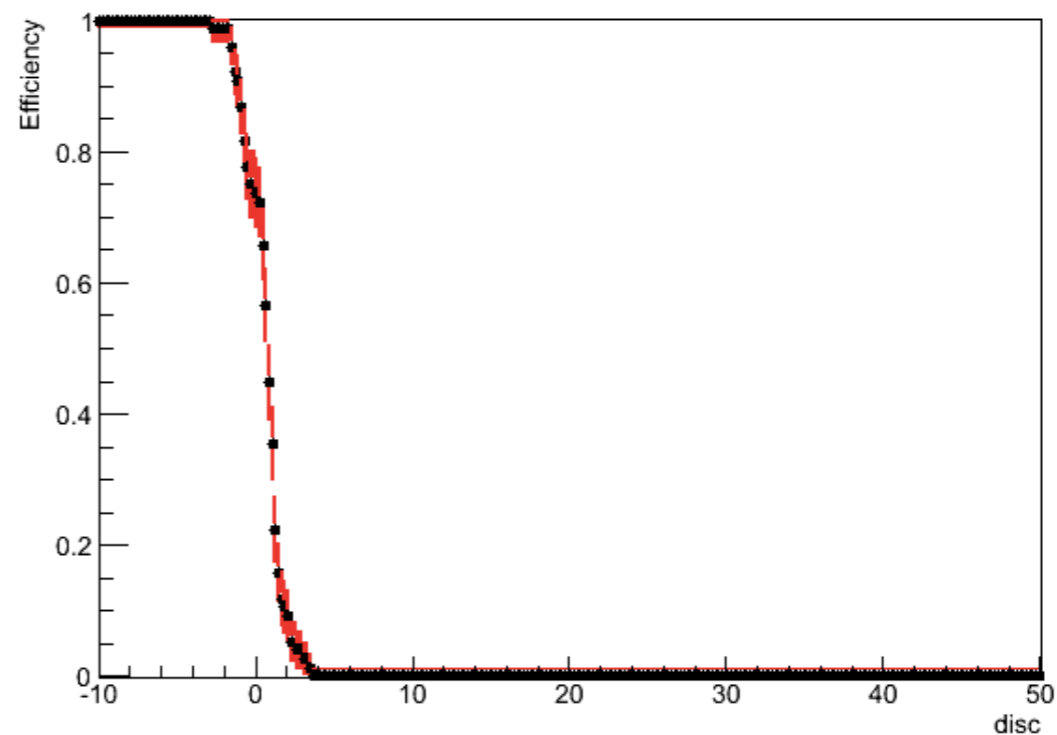

- Need to find the names of offlineJetTagCollection and trackIPTagInfoCollection to plot vertex distributions and efficiencies vs offline
- Need to generate reference ttbar events w/ the original menu...
