

# Jet production and QCD measurements at HERA

*Wednesday 27 August 2014 09:00 (25 minutes)*

## Summary

The production of inclusive jets as well as of dijet and trijet topologies is investigated at HERA. Both the H1 and the ZEUS experiment have determined the corresponding cross sections with improved experimental precision, compared to previous measurements. For both experiments, a hadronic energy scale uncertainty as small as 1% is reached. The value of the strong coupling constant  $\alpha_s(M_Z)$  is extracted and its running is probed.
