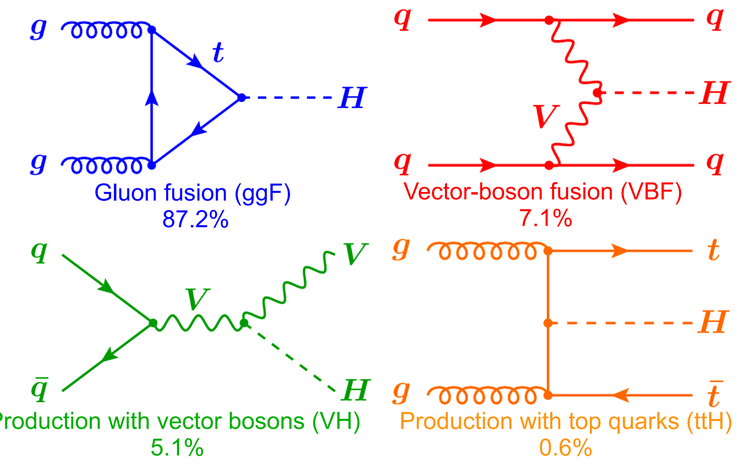
Properties of the Higgs boson in the diphoton decay channel with the ATLAS detector

Elisabeth Petit (DESY)

Properties of the SM Higgs boson

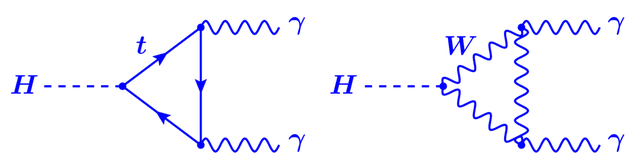
Standard Model predicts production cross sections and decay branching fractions (for a given Higgs mass)

Standard Model production modes



Higgs boson decay to two photons

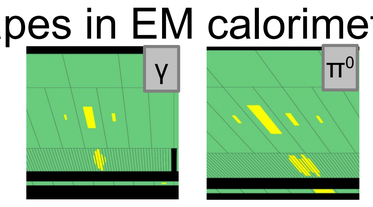
- Through top-quark and W-boson loops
- BR(H→γγ) = 0.23% (m_H = 125 GeV)



Photon identification

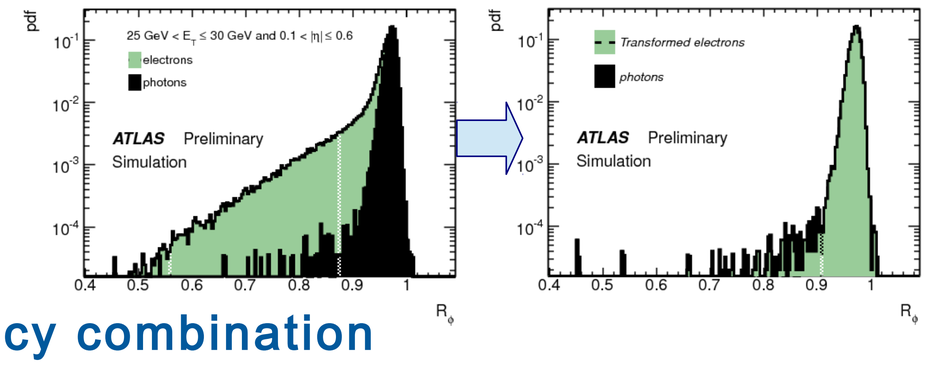
H→γγ needs jets rejection of ~10^4

- Discrimination from hadronic background based on shower shapes in EM calorimeter



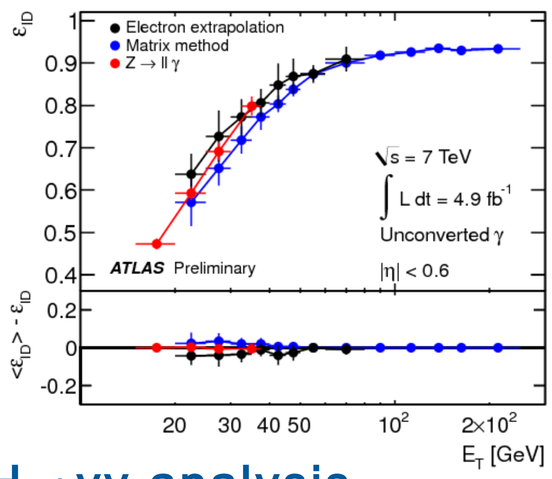
Efficiency extrapolation from Z→ee

- Very pure electron sample without biasing shower shapes
- Shower-shapes of photons and electrons very similar
- Remaining differences corrected for by dedicated transformations



Efficiency combination

Measurements in good agreement with results from two other methods and combined



Uncertainties range from ~5% at low E_T to ~1-2% at higher E_T

ATLAS-CONF-2012-123

Impact on H→γγ analysis

Composition of the selected sample

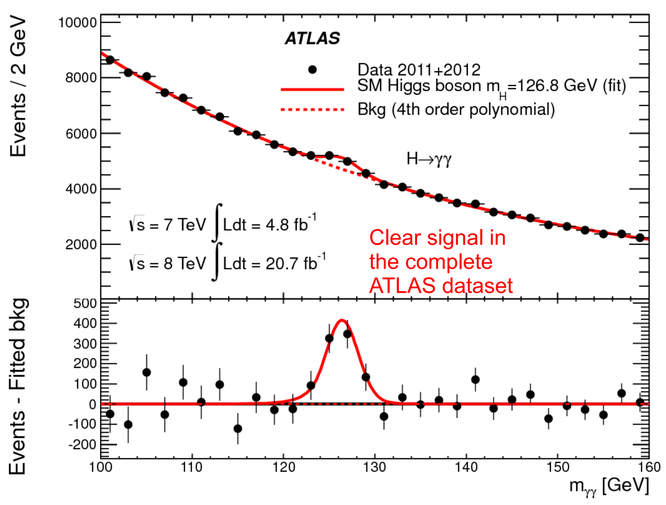
γγ	75±3%
γ+jet and jet+γ	22±2%
jet+jet	2.6±0.5%

Identification efficiency uncertainty on expected number of signal events

July 2012	10.8%
December 2012	5.3%
March 2013	2.4%

Second-largest experimental uncertainty on the measured inclusive signal strength

July 2012: Higgs boson discovery



Phys. Lett. B 726 (2013)

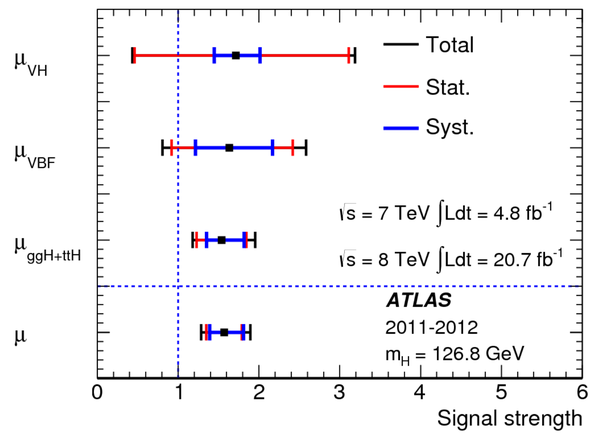
Production modes and couplings

Signal strength: $\mu = \frac{N_{observed}}{N_{SMHiggs}}$

Measurement in H → γγ consistent with SM prediction within 1.9σ:

μ=1.55 ± 0.23 (stat) ± 0.15 (syst) ± 0.15 (theo)

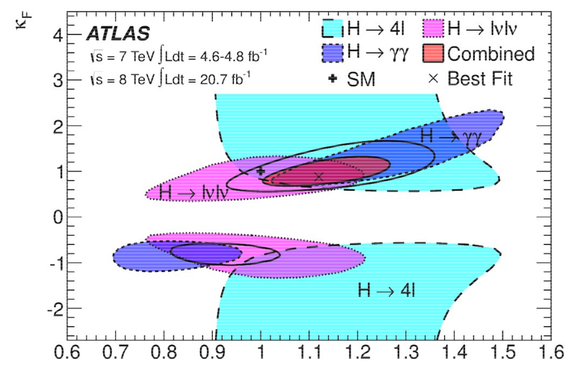
Signal strength for different production modes in H→γγ



In agreement with SM predictions

Coupling measurements: combination with other channels

Effective scale factors κ for the coupling to fermions (F) and vector bosons (V)



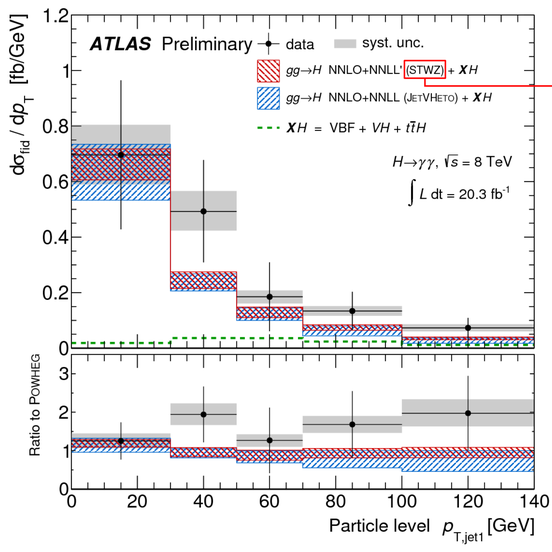
In agreement with SM prediction κ = 1

Phys. Lett. B 726 (2013)

Differential cross-sections

First measurements of Higgs boson differential cross section: studying production and decay kinematics

High signal efficiency: H→γγ well suited for these measurements



Connection to DESY theory group

ATLAS-CONF-2013-072
