

Workshop on
**Monte Carlo Methods in the
Natural Sciences, Engineering
and Economy**

19-21 February 2013, DESY, Hamburg

The aim of the workshop is to bring together experts on Monte Carlo simulation in the natural sciences, in engineering and in economy. The focus is on providing a forum for discussing state-of-the-art technology from various fields in order to seed interdisciplinary exchange of knowledge and potentially common efforts or development.

Applications of Monte Carlo methods will be covered, amongst others, in high energy physics, condensed matter physics, cosmology, climate research, biology, chemistry, economy and finance.
