

## PEPTIDE FOLDING: LIFE'S ORIGAMI ENLIGHTENED BY IR & THZ RADIATION

ANOUK M. RIJS

Radboud University,  
Institute for Molecules and  
Materials, FELIX Laboratory,  
Nijmegen, The Netherlands

Spectroscopy offers the most direct experimental probe into the quantum-chemical nature, hence into molecular structure, of isolated peptides. Especially powerful is the far-IR/THz region, exciting structural characteristic, delocalized vibrations and hydrogen bonds, thereby enlightening the interplay between peptide folding interactions. In this talk, I will capture the excitement of the recent developments in far-IR/THz action spectroscopy of peptides performed in the reductionist's paradise.

FRIDAY,  
06.11.2015

2:00 PM

CFEL  
SEMINAR ROOMS I-III
