Investigation of spin correlations in top pairs:

$$\frac{1}{N} \frac{d^2 N}{d \cos \theta_{l+}^* d \cos \theta_{l-}^*} = \frac{1}{4} (1 - \mathcal{A} \kappa_1 \kappa_2 \cos \theta_{l+}^* \cos \theta_{l-}^* + p_+ \cos \theta_{l+}^* + p_- \cos \theta_{l-}^*)$$

$$\mathcal{A} = \frac{N(t_\uparrow \bar{t}_\uparrow + t_\downarrow \bar{t}_\downarrow) - N(t_\uparrow \bar{t}_\downarrow + t_\downarrow \bar{t}_\uparrow)}{N(t_\uparrow \bar{t}_\uparrow + t_\downarrow \bar{t}_\downarrow) + N(t_\uparrow \bar{t}_\downarrow + t_\downarrow \bar{t}_\uparrow)}$$

ok, needs to unweight SM asymmetry before weighting

Not usable, ME are not in the restframe of the ttbar-system.

ok, but @ tree level

Planned, LO

Planned NLO

TopRex (SM-Spin Spin average)

TopRex (individual Spin-Spin samples.)

Pythia (w/o Spin correlation)

Alpgen (Spin-Spin SM average)

MC@NLO (Spin-Spin SM average)

CMS-FastSim + PAT Reco

Reweighting w( $\cos \Theta_{l-}$ ,  $\cos \Theta_{l+}$ )

Base histograms (LL, RR, LR, RL)

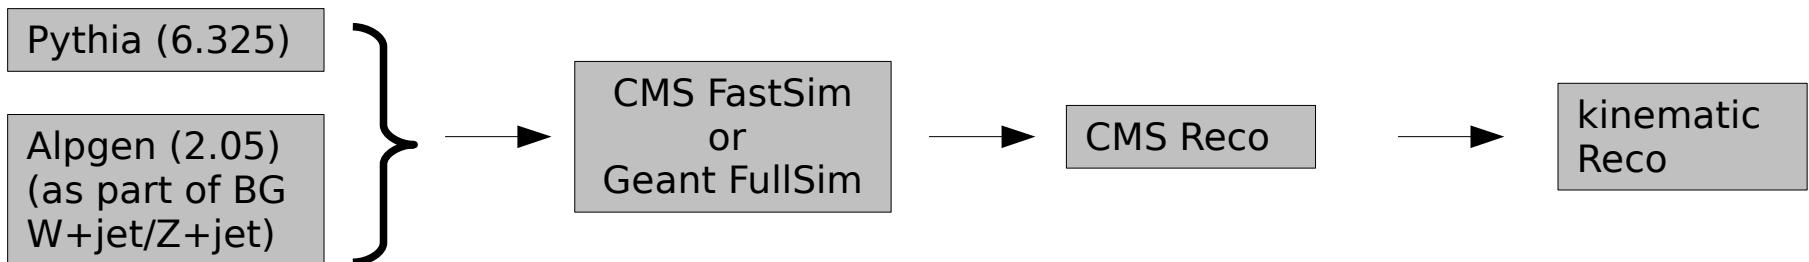

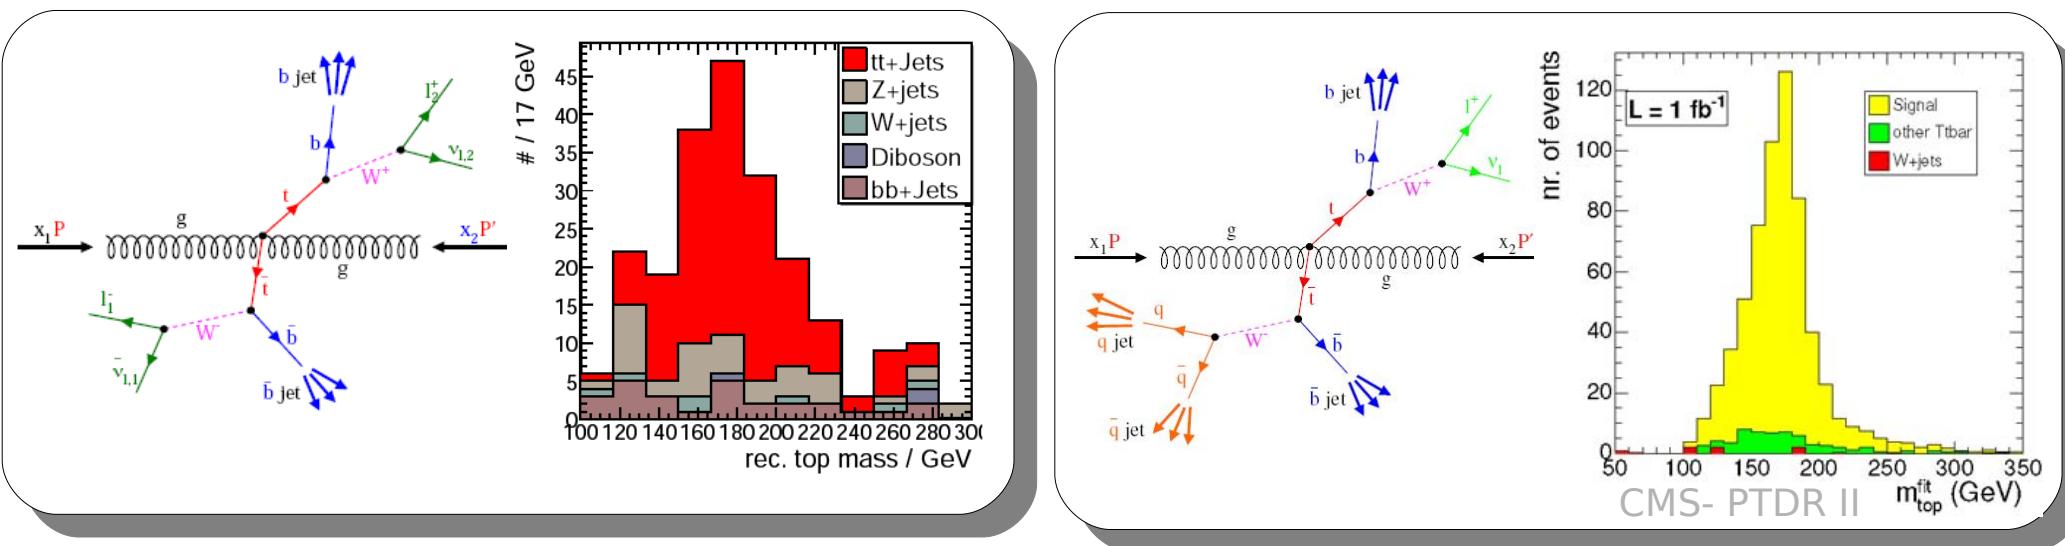

Fit to (MC-) experiment

Need to generate single Spin-Spin events (individual samples or flag events)  
 TopRex: fix ME/maintainance issues, Pythia: no Spin-Spin correlations,  
 MadGraph/Alpgen: only Spin-Spin average

# Top MC issues

Th. Hermanns, S. Kalinin, Y. Küssel, D. Tornier, O. Pooth, M. Zöller

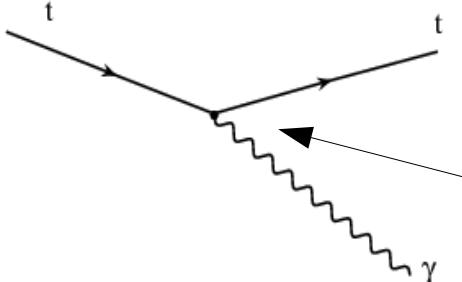

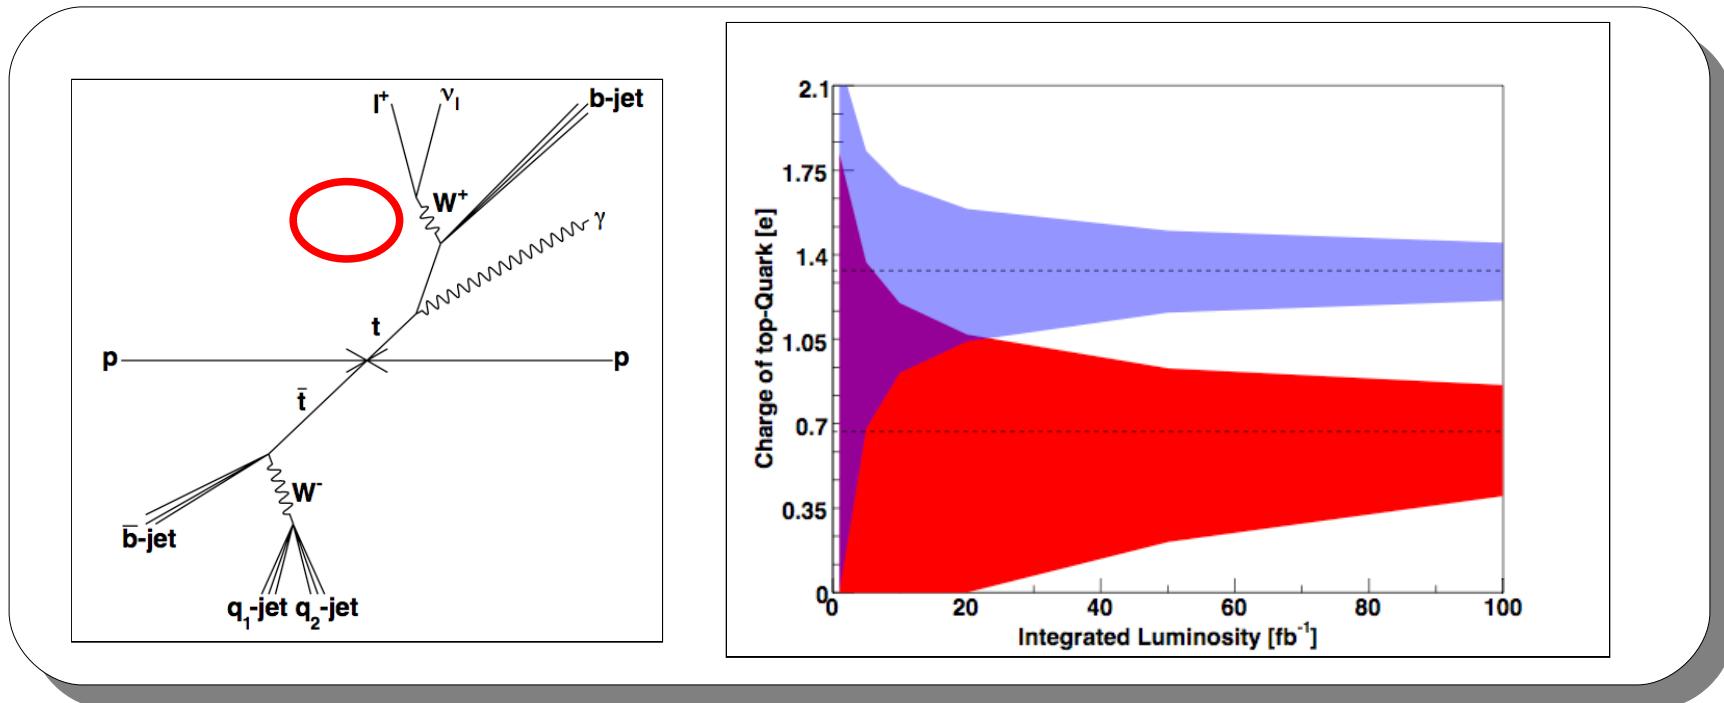

top rediscovery (dileptonic, semileptonic, full hadronic channel)

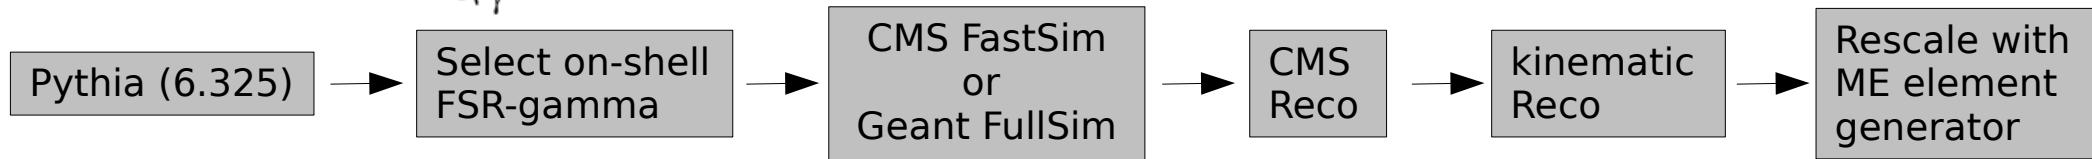

# Top MC issues

A. Stahl, M. Davids, M. Duda, F. Farshbaf, H. Geenen, W. Haj Ahamd,  
Th. Hermanns, S. Kalinin, Y. Küssel, D. Tornier, O. Pooth, M. Zöller

## top charge

$$\Gamma_\mu(p,q,k) = -ie\{\gamma_\mu [F_{1V}(k^2) + \gamma_5 F_{1A}(k^2)] + \frac{\sigma_{\mu\nu}}{2m_t}(p+q)^\nu [iF_{2V}(k^2) + \gamma_5 F_{2A}(k^2)]\}$$

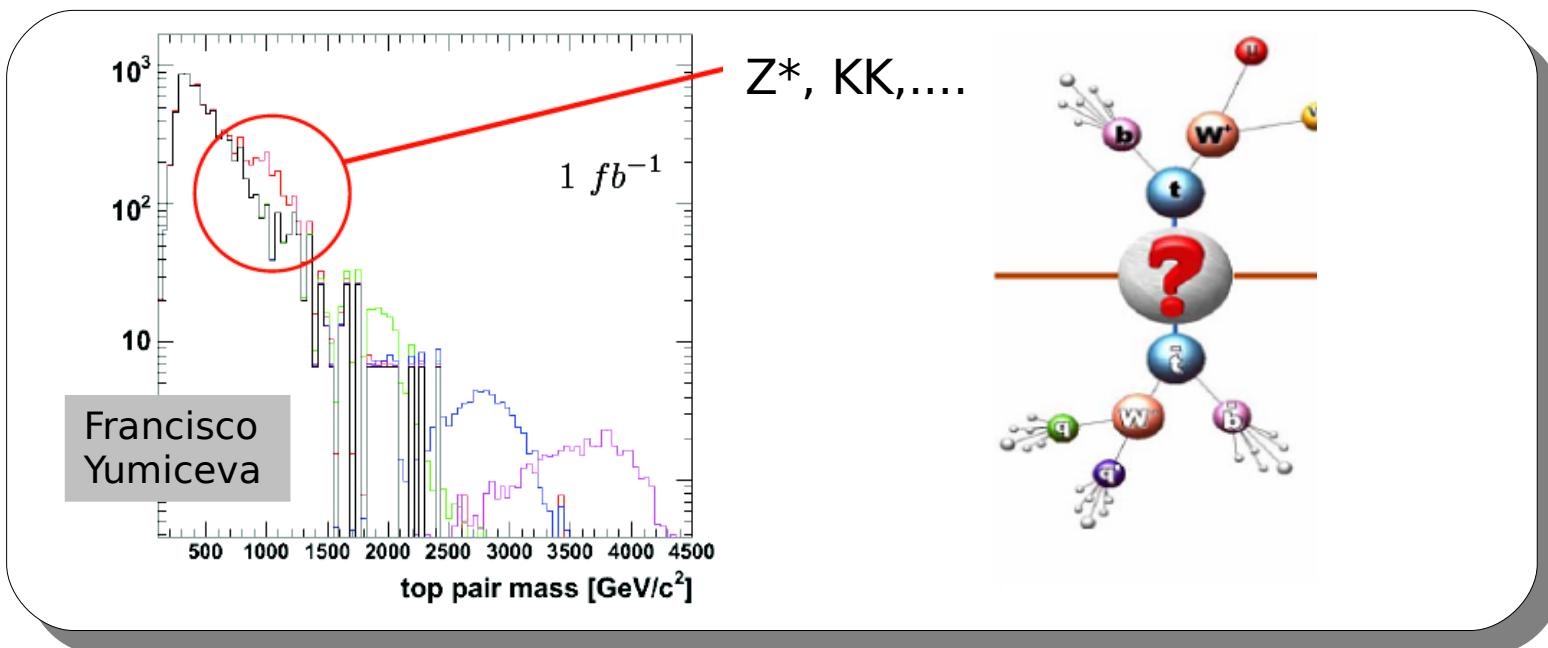

Could we get a Pythia interface for this ME-Generator (Baur-Generator)  
Baur: allow to model the  $tt\gamma$  vertex (charge+Vector/Axial component form-factors)

# Top MC issues

Search for lepton flavour violating  $\tau \rightarrow \mu\mu\mu$  decay:

- Optimized  $\tau$ -vertex reconstruction (L. Perchalla, P. Sauerland)
- LFV decay (M. Giffels)

- Generator: pythia+tauola
- Decay mode implemented into Pythia
- No special ME used
- Event generation according to phase space

### Current implementation:

- ME not yet implemented into a generator
- Event selection via hit-and miss according to ME

almost model independent matrix element:

$$\begin{aligned} \mathcal{L} = & G \left( g_{LL}^S (\bar{\mu} P_R \mu) (\bar{\mu} P_L \tau) + g_{LR}^S (\bar{\mu} P_R \mu) (\bar{\mu} P_R \tau) + g_{RL}^S (\bar{\mu} P_L \mu) (\bar{\mu} P_L \tau) + g_{RR}^S (\bar{\mu} P_L \mu) (\bar{\mu} P_R \tau) \right. \\ & + g_{LL}^V (\bar{\mu} \gamma_\nu P_R \mu) (\bar{\mu} \gamma^\nu P_L \tau) + g_{LR}^V (\bar{\mu} \gamma_\nu P_R \mu) (\bar{\mu} \gamma^\nu P_R \tau) \\ & + g_{RL}^V (\bar{\mu} \gamma_\nu P_L \mu) (\bar{\mu} \gamma^\nu P_L \tau) + g_{RR}^V (\bar{\mu} \gamma_\nu P_L \mu) (\bar{\mu} \gamma^\nu P_R \tau) \\ & \left. + g_{LR}^T \left( \bar{\mu} \frac{\sigma_{\rho\nu}}{\sqrt{2}} P_R \mu \right) - \bar{\mu} \frac{\sigma^{\rho\nu}}{\sqrt{2}} P_R \tau \right) + g_{RL}^T \left( \bar{\mu} \frac{\sigma_{\rho\nu}}{\sqrt{2}} P_L \mu \right) - \bar{\mu} \frac{\sigma^{\rho\nu}}{\sqrt{2}} P_L \tau \right) \end{aligned}$$
