## Session and Location

Wednesday Session, Poster Wall #63 (Auditorium Gallery Right)

## Abstract content

The MINOS+ experiment is an on-axis neutrino oscillation search situated in the Fermilab NuMI beam. We utilize  $\nu_\mu \rightarrow \nu_e$  appearance candidates to probe for exotic neutrino oscillation phenomena. Here we consider a 3+1 sterile neutrino model, where  $\nu_\mu \rightarrow \nu_e$  oscillation could be further mediated by the presence of a sterile neutrino. Updated limits for  $\sin^2 2\theta_{\mu e}$  at values of  $\Delta m_{41}^2 < 1 \text{ eV}^2$  using a larger dataset are presented, and the results of this analysis are compared to those of LSND and MiniBooNE.

## Poster included in proceedings:

yes

**Primary author(s) :** Prof. PAWLOSKI, Gregory (University of Minnesota); Dr. SCHRECKENBERGER, Adam (The University of Texas at Austin); Dr. GERMANI, Stefano (University College London)

**Presenter(s) :** Prof. PAWLOSKI, Gregory (University of Minnesota)

**Session Classification :** Poster Session Wednesday

**Track Classification :** Poster (not participating in poster prize competition)
