

# Measuring Coherent Elastic Neutrino Nucleus Scattering with the CENNS-10 Liquid Argon Detector

## Authorship annotation

for the COHERENT Collaboration

## Session and Location

Wednesday Session, Poster Wall #25 (Robert-Schumann-Room)

## Abstract content

The COHERENT experiment recently made the first measurement of coherent elastic neutrino nucleus scattering (CEvNS) at the  $6.7\sigma$  level with a 14.6 kg CsI(Na) crystal at the Oak Ridge National Laboratory. COHERENT uses the Spallation Neutron Source at ORNL as the neutrino source and also plans to test the  $N^2$  dependence of the CEvNS cross section by making measurements on multiple targets. To that end, COHERENT also deploys a 22 kg fiducial mass liquid argon detector CENNS-10, which was commissioned at ORNL in late 2016. There have been two dedicated data runs of CENNS-10, one in early 2017 and one in late 2017 after an upgrade of the light collection ability and increased shielding. I will present initial results of the first data run, a first look at the second data run, and the future plans of the COHERENT liquid argon program.

## Poster included in proceedings:

yes

**Primary author(s) :** Mr. ZETTLEMOYER, Jacob (Indiana University, Bloomington)

**Presenter(s) :** Mr. ZETTLEMOYER, Jacob (Indiana University, Bloomington)

**Session Classification :** Poster Session Wednesday

**Track Classification :** Poster (participating in poster prize competition)
