

The new small angle X-ray scattering beamline P62 at the PETRA III extension workshop

5 – 6 April 2018, DESY, Hamburg

A new small angle X-ray scattering beamline P62 is currently planned to be built at PETRA III making use of the high source brilliance.

Finding the optimum instrumentation of P62 requires input from the future users of the SAXS beamline. Therefore, the workshop aims to discuss different relevant topics (e.g., energy range, SAXS resolution, sample environments, ...) for designing the best user-friendly SAXS instrument.
